

Formal Endorsement Statement by Thomas Campbell

To Whom It May Concern,

For decades, both my research in physics and my exploration of consciousness have led to a clear conclusion: our physical world is an information-based virtual reality, and consciousness is the fundamental substrate from which our reality is derived. Our physical senses do not generate awareness; rather, they serve as the default interface to interpret data provided by the Larger Consciousness System within our physical rule-set.

Perception independent of physical eyes—what many call non-visual perception—is not magic or anomalous. It is a direct demonstration of an individuated unit of consciousness accessing the data stream directly via clear, focused intent.

Nicola Farmer and the ICU Academy (Inspiring Children Universally) are doing vital, pioneering work in this field. Young children are naturally open; their perceptual filters and beliefs have not yet been rigidified by a culture that insists the material world is all there is. Nicola's programme provides a structured, supportive, and grounded environment where children not only learn to access non-physical data streams, but also develop emotional balance, cognitive resilience, and a deep sense of personal capability.

When young people discover first hand that their minds are not confined by physical boundaries, their worldview transforms. They grow up with less fear, greater empathy, and an organic understanding of their interconnectedness—the very definition of lowering personal entropy and evolving quality of consciousness.

I commend Nicola Farmer for her integrity, compassion, and courage in bringing these capabilities into the open, and I am pleased to endorse the ICU Academy and its mission to awaken the full potential of our children.

Sincerely,

Thomas Campbell

Physicist, Author of *My Big TOE* (Theory of Everything)
